	The MAILING DATE of this communication appears on the cover sheet with the correspondence address							
Period for Reply  A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### **DETAILED ACTION**

1. This action is issued in response to Application filed on July 11, 2003.

2. Claims 1-30 are pending.

# Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 4. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Claim 7 recites the limitation "the type name" on the first line of claim 7. There is insufficient antecedent basis for this limitation in the claim.

## Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 7. Claims 1,4-9,11,14-19,21, and 24-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Peskin (US Patent Publication No. 20030046304).

Application/Control Number: 10/618,407 Page 3

Art Unit: 2161

Regarding Claims 1,11, and 21, Peskin discloses a method of automating an identification and type information configuration for a real-time data feed, comprising:

automatically (¶0026, lines 1-3, Peskin) creating trigger statements (¶0026, lines 3-6, Peskin) for the real-time data feed<sup>2</sup> (¶0031, lines 2-4, Peskin); and

automatically (¶0026, lines 1-3, Peskin) deriving a type information<sup>3</sup> (¶0034, lines 8-14, Peskin) for the real-time data feed (¶0031, lines 2-4, Peskin) from a column being loaded (Fig. 2, item 204, Peskin).

Regarding Claims 4,14, and 24, Peskin discloses a method wherein the feed is loaded to a database (Fig.1, items 112,114,116; ¶0031, lines 2-14, Peskin; wherein the action of loading corresponds to the action of connecting); and further comprising building a data structure for a database trigger (¶0063, lines 1-10, Peskin; wherein "event-based appointment table" corresponds to a data structure and a database trigger corresponds to "event-trigger field").

Regarding Claims 5,15, and 25, Peskin disclose a method comprising converting the data structure to a type descriptor (Fig.5; ¶0070, lines 1-8, Peskin;

<sup>&</sup>lt;sup>1</sup> Examiner notes; the electronic scheduler is not based on time, therefore allowing the scheduler to

perform its actions when needed (i.e. automatically).

The real-time data feed corresponds to real-time data acquisition component, which is stored upon the electronic scheduler.

wherein a type descriptor corresponds to "event"), in order to identify a type of data that the data structure is expected to hold (¶0073, lines 3-12, Peskin).

Regarding Claims 6,16, and 26, Peskin discloses a method comprising extracting a sub-type descriptor from the type descriptor (¶0072, lines 9-16, Peskin; wherein a sub-type descriptor corresponds to the "event action", which cannot take place unless the event is satisfied), to automatically (¶0026, lines 1-3, Peskin) find the type of data being loaded (¶0034, lines 8-14, Peskin) by the real-time data feed (¶0031, lines 2-4, Peskin).

Regarding Claims 7,17, and 27, Peskin discloses a method comprising storing the type name for the data feed (¶0048, lines 5-7, Peskin), to automatically (¶0026, lines 1-3, Peskin) find the type of data being loaded (¶0034, lines 8-14, Peskin) by the real-time data feed (¶0031, lines 2-4, Peskin).

Regarding Claims 8,18, and 28, Peskin discloses a method comprising getting a table name (Fig.2, item204, "Contact Table", Peskin) and a column name (Fig.2, item 208, "Contact Number", Peskin) being populated by the real-time data feed (¶0048, lines 11-15, Peskin).

<sup>&</sup>lt;sup>3</sup> Shown are the various type of information that the system can contain.

Art Unit: 2161

Regarding Claims 9,19, and 29, Peskin discloses a method wherein the type information (¶0034, lines 8-14, Peskin) and an extended identification that is referred to as extended-id (¶0055, lines 6-12, Peskin), are obtained from a system catalog to build the data structure (¶0055, lines 1-5, Peskin; wherein the system catalog corresponds to contact record, which is a column located on a table).

## Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 2,3,10,12,13,20,22,23, and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Peskin (US Patent Publication No. 20030046304) as applied to claims 1,4-9,11,14-19,21, and 24-29 above, and further in view of Wilmot (US Patent Publication No. 20040003009).

Regarding Claims 2,12, and 22, Peskin discloses all of the claimed subject matter. However, Peskin does not explicitly disclose a method wherein the trigger statements comprise an insert trigger. On the other hand, Wilmot discloses a method wherein the trigger statements comprise an insert trigger (¶0014, lines 3-

Application/Control Number: 10/618,407

Art Unit: 2161

4, Wilmot). It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate Wilmot's teaching into the Peskin system. A skilled artisan would have been motivated to incorporate the insert trigger after the creation of the data feed because a trigger allows a user to fill in missing information before it is committed and check that any changes to a system are correct. Peskin and Wilmot are analogous art because they are from the same field of endeavor of real-time information within a database. As a result, in order for the missing information to get filled in, there must be a statement telling the system to do so (i.e. insert trigger).

Page 6

Regarding Claims 3,13, and 23, the combination of Peskin in view of Wilmot, disclose a method wherein the trigger statements comprise a plurality of update triggers (¶0014, lines 3-4, Wilmot).

Regarding Claims 10,20, and 30, the combination of Peskin in view of Wilmot, disclose a method comprising getting a plurality of unique pairs () of a plurality of table names (Figs. 2,3,4, "Contact Table", "Location Table", "Event-Based Appointment Table", Peskin) and a plurality of column names (Figs. 2,3,4, "Contact Number", "Address", "Event Action", Peskin) for which triggers will be automatically created (¶0026, lines 1-3, Peskin).

Points of Contact

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Chelcie Daye whose telephone number is 571-272-

3891. The examiner can normally be reached on M-F, 7:00 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Safet Metjahic can be reached on 571-272-4023. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
